CAPRA
FLEXIBLE PROTECTION

CAPRA FLEXIBLE PROTECTION

VERSATILE APPLICATIONS

CAPRA Protection shows its advantages wherever areas or sites need to be massively protected within a short period of time. The mobile safety fence

system is set up by means of a forklift in such a way that it meets requirements. The only prerequisite is a level surface.

Ports and Airports

Secure cargo and transit areas with extreme flexibility, CAPRA complies with ICAO and ISPS requirements. Port facilities, warehouses and customs areas at ports and airports often need to be flexibly sized, depending on the volume of goods. In addition, valuable cargo is often stored that must be strongly protected. With CAPRA, all these requirements are met!

Construction Sites and Storage

Flexibly secure construction sites and outdoor storage facilities of any size from intruders. Match the perimeter and length of the fence to any job site or storage area. Especially where standard construction fences offer too little protection, CAPRA Protection is the alternative when extra security is required. Spontaneously expand or reduce the size of your warehouse or construction site.

Events

Vary event sites as desired and control large crowds. No two events are the same and they all have specific safety requirements. With CAPRA Protection, you can perfectly and flexibly adapt your venues to audience numbers or security requirements.

Safety-Critical Areas

Barriers for political, military and police events or in municipal areas. Efficiently cordon off security-critical situations and areas, whether protecting against intruders and vandalism on military property or protecting and separating demonstrations, sites or other areas. At the municipal level, buildings and terrains can be secured flexibly.

Critical Infrastructure (CNI)

Energy supply is one of the critical infrastructures (CNI) and requires special protection. Even in the construction phase, everything must be safe and provide protection against sabotage. CAPRA, with its mobile structure, offers everything needed to make construction sites and properties completely safe.

MASSIVE BUT MOBILE

You can place and remove our mobile security fences without great effort and use the system spontaneously or for the long term. Our elements are based on a solid, 850 kg concrete base, which can be easily moved and set with a forklift truck. Place the single elements at the desired location.

Thanks to its patented “interlocking system” on the concrete base, CAPRA Protection ensures that the elements interlock and are immovable. If the system is to be used at a different location, the fence elements can also be loaded onto trucks and transported in larger quantities.

MAXIMUM SAFETY ACCORDING TO PATENTED PRINCIPLE

CAPRA Protection offers the best protection, secure shielding and maximum safety – despite its flexibility and mobility.

Three elementary features provide safety:

- ◆ the 850 kg concrete base provides stability
- ◆ the solid steel panels are firmly screwed and equipped with anticlimb solutions on request
- ◆ our patented interlocking system ensures a stable interlocking of the concrete bases

The massive bases in combination with the interlocking make it almost impossible to move or knock down the coherent fence. CAPRA Protection security fences are available on request with bespoke fillings.

ASTONISHING FLEXIBILITY

You need to secure changing plots or building sites? You have to adapt your venue to a changing number of visitors? You have to increase or decrease your storage area or port facility depending on the freight traffic? With CAPRA, the mobile security fence system, the challenges will be mastered.

CAPRA Protection fence elements are deployed wherever maximum security and shielding are important and at the same time there is a need for short term changes and rearrangements in the perimeter. You can build your site fast and exactly according to your needs.

CAPRA FLEXIBLE PROTECTION

CAPRA PROTECTION DOUBLE

The simplest variant: our solid concrete base with double bar panel without bent arm.

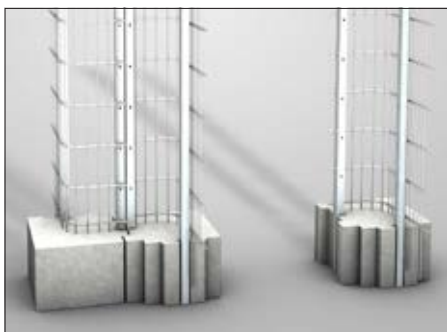

CAPRA PROTECTION BOOM

The fence element with additional bent arm and barbed wire provides more security.

CAPRA PROTECTION Y-BOOM

For more safety on all sides: Our fence element with bent arm and barbed wire on both sides. Alternatively also possible with Nato wire.

CAPRA 90° ANGLE ELEMENT

More flexibility and safety with matching corner elements.

CAPRA 45° ANGLE ELEMENT

The new 45° corner elements allow even more possibilities and adaptations to the conditions.

YOU CAN SELECT THE FENCE ELEMENTS ACCORDING TO YOUR NEEDS.

CAPRA fence elements are modularly constructed and can be combined in various ways. Additionally, we also offer customized solutions. CAPRA is the concept for maximum flexibility when it comes to mobile security.

IBOOM IS THE SYMBIOSIS OF CAPRA AND SECONTEC

The mobile security fence with integrated video – remote monitoring – without any groundworks. The perfect symbiosis of the CAPRA high security fence and the SECONTEC video alarm system S1 plusAudio.

CAPRA PROTECTION GATES AND PASSAGES

On request, we can fit gates, doors or passageways into your CAPRA security fence system.

CAPRA PROTECTION INDIVIDUAL

Even special requests or special requirements are no problem – we find a tailor-made solution and implement everything precisely!

Customize the CAPRA Protection System in terms of color and choose from all RAL colors.

A PERFECT SYMBIOSIS OF THE CAPRA HIGH-SECURITY FENCE AND THE ACTIVE SECONTEC VIDEO ALARM SYSTEM

- Concrete base with a weight of 850 kg, featuring a patented interlocking system, integrated cable tray and sabotage protection
- High mechanical resistance due to the massive concrete base in combination with the interlocking system
- Maximum flexibility in installation, disassembly and repositioning
- Special modules available for 45° and 90° angles, doors and gates
- Complies with ICAO and ISPS guidelines
- Integrated perimeter protection based on the SECONTEC S1 Video Alarm System
- 24/7 LIVE video surveillance through the SECONTEC Video Operation Center (VOC)
- Integrated audio alarm system for addressing potential intruders
- Remote opening of gates and barriers by the VOC
- Applications include ports, airports, critical infrastructure, industrial facilities, automotive, construction sites and logistics
- Suitable for security-critical areas such as law enforcement, military, government, prisons, data centers and more

TAMPER-PROOF RIGHT FROM THE START.

The mobile security fence with integrated remote video surveillance, all without the need for groundworks. The perfect symbiosis of the CAPRA high-security fence and the SECONTEC Video Alarm System S1 plus Audio. It has never been easier to securely monitor video from remote locations.

MADE IN EUROPE

ADVANTAGES AT A GLANCE

- ◆ Flexibility to adapt the perimeter fence to changing needs
- ◆ Massive stability and security despite flexibility
- ◆ Respond to changes quickly
- ◆ Absolute secure mobile fence
- ◆ High durability and value-retaining
